Abstract

A revised checklist of the flies of superfamilies Tephritoidea and Sciomyzoidea of Finland is provided. The following families are covered: Eurygnathomyiidae, Lonchaeidae, Neottiophilidae, Pallopteridae, Piophilidae, Platystomatidae, Tephritidae, Ulidiidae (Tephritoidea); Coelopidae, Dryomyzidae, Heterocheilidae, Phaeomyiidae, Sciomyzidae, Sepsidae (Sciomyzoidea).

Keywords

Finland, Diptera, checklist, Tephritoidea, Sciomyzoidea

Introduction

With over 7800 known extant species (Pape et al. 2011), Tephritoidea is one of the larger Diptera superfamilies. The nominotypical family of Tephritoidea, the fruit flies (Tephritidae), includes over half of the currently known species in the superfamily. The highest diversity of tephritoids occurs in the tropics. Six of the nine extant tephritoid families have been found in Finland: no richardiid, ctenostylid or pyrgotid have been found in the country. The Tephritidae, Ulidiidae and Platystomatidae (plus Pyrgotidae) form a well-defined, probably monophyletic group. The other tephritoid families are more basal in their phylogenetic position (Korneyev 1999). The exact relationships

Table 1. Number of species in tephritoid and sciomyzoid families.

Family	Number of species in			Level of knowledge
	World (Pape et al. 2011)	Europe (Pape and Beuk 2013)	Finland	
Tephridoidea:				
Eurygnathomyiidae	1	1	1	good
Lonchaeidae	504	96	41–44	average
Neottiophilidae	4	2	2	average
Pallopteridae	70	22	13	good
Piophilidae	78	27	15	average
Platystomatidae	1162	21	2	good
Tephritidae	4712	267	69	average–good
Ulidiidae	675	106	16	good
Sciomyzoidea:				
Coelopidae	35	3	1	average
Dryomyzidae	22	5	5	average
Heterocheilidae	2	1	1	average
Phaeomyiidae	3	3	2	good
Sciomyzidae	605	136	73–74	good
Sepsidae	340	48	32	good

between the families are far from settled and some authors exclude Pallopteridae and Eurygnathomyiidae from the superfamily (Wiegmann et al. 2011). Several subfamily schemes have been proposed for Tephritidae. The classification by Korneyev (2000) is adopted here. For Pallopteridae, Piophilidae (with Neottiophilidae) and Ulidiidae we follow McAlpine (1981), Ozerov (2005) and Kameneva and Korneyev (2006) respectively. Norrbom et al. (1999) provide a catalogue of world tephritid names. The Finnish tephritoid flies were last listed by Winqvist and Kahanpää (2007). Hackman (1956) reviewed the Lonchaeidae of Eastern Fennoscandia. This paper is now somewhat outdated, but still valuable.

Sciomyzoidea is a smaller superfamily with some 1150 described species (Pape et al. 2011). It includes two medium-sized families (Sciomyzidae and Sepsidae) and nine smaller families comprising at most 30 species. The millipede parasitoids of family Phaeomyiidae are sometimes classified as a subfamily of Sciomyzidae. The coelopids and heterocheilids, with just one species each in Finland, are closely associated with stranded marine seaweed. The family placement of *Heterocheila* has been rather unstable: during the last 40 years it has been placed in Helcomyzidae, Dryomyzidae and Coelopidae or regarded as having a separate family status. Here we follow the recent world catalogue (Mathis 2011) and keep Heterocheilidae as a separate family. The family name Heterocheilidae is preoccupied by Heterocheilidae Railliet & Henry, 1915 in Nematoda (Mathis 2011). This homonymy has not yet been resolved.

World catalogues have recently been published for Coelopidae (Mathis and McAlpine 2011) Dryomyzidae (Mathis and Sueyoshi 2011), Heterocheilidae (Mathis 2011), Sciomyzidae (Rozkošný 1995) and Sepsidae (Ozerov 2005). The Finnish sciomyzoid flies were last listed by Winqvist and Kahanpää (2007).

 = *unicolor* Loew, 1847
Tetanocera hyalipennis von Roser, 1840

Tetanocera kerteszi Hendel, 1901

= *griseicollis* Frey, 1924

= *ornatifrons* Frey, 1924

Tetanocera lapponica Frey, 1924

Tetanocera latifibula Frey, 1924

Tetanocera montana Day, 1881

= *borealis* Frey, 1924

Tetanocera phyllophora Melander, 1920

= *nigricosta* misid.

Tetanocera silvatica Meigen, 1830

TRYPETOPTERA Hendel, 1900

Trypetoptera punctulata (Scopoli, 1763)

SEPSIDAE Walker, 1833

ORYGMATINAE Frey, 1921

ORTALISCHEMA Frey, 1925

Ortalischema albitarse (Zetterstedt, 1847)

SEPSINAE Walker, 1833

THEMIRA Robineau-Desvoidy, 1830

Themira annulipes (Meigen, 1826)

Themira arctica (Becker, 1915)

Themira biloba Andersson, 1975

Themira germanica Duda, 1926

Themira gracilis (Zetterstedt, 1847)

Themira leachi (Meigen, 1826)

Themira lucida (Staeger, 1844)

Themira malformans Melander & Spuler, 1917

Themira minor (Haliday, 1833)

Themira nigricornis (Meigen, 1826)

Themira paludosa Elberg, 1963

Themira pusilla (Zetterstedt, 1847)

Themira putris (Linnaeus, 1758)

Themira superba (Haliday, 1833)

SALTELLA Robineau-Desvoidy, 1830

Saltella sphondylii (Schränk, 1803)

NEMOPODA Robineau-Desvoidy, 1830

Nemopoda nitidula (Fallén, 1820)

= *cylindrica* (Fabricius, 1794) preocc.

Nemopoda pectinulata Loew, 1873

Nemopoda speiseri (Duda, 1926)

MEROPLIUS Rondani, 1874

Meroplus fukuharai (Iwasa, 1984)

Meroplus minutus (Wiedemann, 1830)

= *stercorarius* (Robineau-Desvoidy, 1830)

SEPSIS Fallén, 1810

Sepsis biflexuosa Strobl, 1893

Sepsis cynipsea (Linnaeus, 1758)

Sepsis duplicata Haliday, 1838

= *pilipes* van der Wulp, 1871

Sepsis flavimana Meigen, 1826

= *borealis* Frey, 1825

Sepsis fulgens Meigen, 1826

= *communis* Frey, 1925

Sepsis luteipes Melander & Spuler, 1917

= *lamellifera* Frey, 1925

Sepsis nigripes Meigen, 1826

Sepsis orthocnemis Frey, 1908

Sepsis punctum (Fabricius, 1794)

= *luteipes* misid.

Sepsis thoracica (Robineau-Desvoidy, 1830)

Sepsis violacea Meigen, 1826

Excluded species

Allopiophila dudai (Frey, 1930) not found within present borders

Bactrocera sp. imported with fruit

Campiglossa irrorata (Fallén, 1814) not found within present borders

Ceratitis capitata (Wiedemann, 1824) imported with fruit

Earomyia crystallophila (Becker, 1895) not found within present borders

= *nigroviolacea* (Frey in Lundström & Frey, 1913)

Lonchaea hirticeps Zetterstedt, 1838 misidentified

Orygma luctuosum Meigen, 1830 not found within present borders

Pherbellia dorsata (Zetterstedt, 1846) misidentified

Tephritis nigricauda (Loew, 1856) misidentified

Notes

***Allopiophila dudai* (Frey, 1930).** This species was described by Frey (1930) from the Kola peninsula (Murmansk Oblast, Russia). Frey et al. (1941) and Hackman (1980) listed it from Finland, but to our knowledge it has never been reliably recorded from this country.

***Allopiophila* sp. A.** An apparently undescribed arctic species near *A. vulgaris*.

***Campiglossa* sp. A** is a distinct, possibly undescribed species of *Campiglossa*. It is common on *Saussurea alpina* in Northern Finland (Juhani Itämies, priv. comm.).

***Lonchaea bruggeri* Morge, 1967, *L. contigua* Collin, 1953 and *L. difficilis* Hackman, 1956.** No males have been confirmed from the country. See Winqvist and Kahanpää (2007) for more details.

***Lonchaea bukowskii* Czerny, 1934.** No males have been confirmed from the country.

***Tephritis* sp. cf. *rydeni* Hering, 1956.** Finnish material formerly assigned to *T. dioscurea* (Loew, 1856) belongs to a currently unrecognised species that may be *T. rydeni* Hering (Söderman et al. 2007, Winqvist and Kahanpää 2007).

***Tetanocera amurensis* Hendel, 1909.** Recorded from Finland in Fauna Europaea (Rozkošný and Knutson 2011) and known from Estonia and Northwestern European Russia (Elberg 1988). We have been unable to find any Finnish material or primary published records.
